

Partner search for IEE II:

Energie Tirol, the independent energy consulting agency of Tyrol, is currently preparing several projects concerning energy performance certificates and refrigeration applications. We are looking for European cooperation partners that would like to participate in European funding programs concerning these themes.

Project ideas – energy performance certificate:

- Public relations measures are necessary to raise public awareness of energy performance certificates. Therefore, Energie Tirol is preparing an information brochure about “Energy efficiency and energy performance certificate”. An information campaign will start in spring 2008.
- As a next step, a quality assurance system for energy performance certificates has to be established. Selected certificates will be compared to real energy performances of buildings to guarantee the further development and optimization of the energy performance certificate.
- We are currently preparing a project regarding “Energy performance certificates and public buildings”. This project includes special refurbishment considerations.

Project idea – refrigeration application:

- Refrigeration applications cause major electricity consumption in some sectors. A study should estimate and demonstrate possibilities for energy savings by the compilation of applications, systems, technologies and market segments.

About Energie Tirol:

As the energy consulting agency of Tyrol, Energie Tirol has many years of experience in providing expert advice about energy saving measures for buildings. Its customers are individual home owners and builders, business enterprises and communities. We are experienced in developing methodologies for calculating the energy performance of buildings and offering reclamation concepts for buildings.

Additionally Energie Tirol is participating, both as a project coordinator and project partner, in Austrian and European research projects concerning energy efficiency (refurbishment, quality assurance, comfort ventilation).
